1 introduction rolling mills for the production of steel wire
are classified according to the number of mill stand rolls
which form the geometry of the deformation zone
accordingly these can be categorised by the type of roll
groove and the roll transmission path

load calculation of the most loaded rolling element for a - Jun
07 2022

oct 3 2020 this paper presents a new model for calculation
of load for the most loaded rolling element in a rolling
bearing with internal radial clearance the calculation is
based on a so called load factor by multiplying this factor by
the value of the external radial load the load transferred by
the most loaded rolling element of the bearing is obtained
