Lost Utopias Richard Pare, Jennifer Minner, 2016 The pictures in this book bring the argument about reuse and preservation into focus. What is worthy of retaining and what is dispensable? What are the criteria for considering whether a structure should be retained or demolished? How do you define the parameters of taste and utility in making decisions to preserve or destroy? How will future generations regard the destruction of certain structures, will we be considered cultural vandals for not having retained more of the structures that seemed irrelevant at the time? The preservation argument is heightened in the case of the exhibitions sites, as by definition an exhibition is considered a temporary event.--Page 9.

Fiction and Fabrication Pedro Gadanho, 2019 An exciting change is currently taking place in architecture photography: apparently neutral, realistic illustrations are giving way to the creation of an individual reality. New techniques permit unusual angles and perspectives, and digital processing allows for the manipulation of reality. Fine artists have long

discovered the formal language of architecture as a subject. By means of a wide range of contemporary artworks this volume shows the visual bandwidth which architecture photography demonstrates in our post-digital age. With works by: Doug Aitken, Thomas Demand, Filip Dujardin, Roland Fischer, Andreas Gursky, Edgar Martins, Erwin Olaf, Hans Op de Beeck, Bas Princen, Thomas Ruff, Philipp Schaerer, Hiroshi Sugimoto, Wolfgang Tillmans, Jeff Wall and many more.

Photographic Architecture in the Twentieth Century Claire Zimmerman, 2014-05-01 One hundred years ago, architects found in the medium of photography—so good at representing a building’s lines and planes—a necessary way to promote their practices. It soon became apparent, however, that photography did more than reproduce what it depicted. It altered both subject and reception, as architecture in the twentieth century was enlisted as a form of mass communication. Claire Zimmerman reveals how photography profoundly influenced architectural design in the past century, playing an instrumental role in the evolution of modern architecture. Her “picture anthropology” demonstrates how buildings changed irrevocably and substantially through their interaction with photography, beginning with the emergence of mass-printed photographically illustrated texts in Germany before World War II and concluding with the postwar age of commercial advertising. In taking up “photographic architecture,” Zimmerman considers two interconnected topics: first, architectural photography and its circulation; and second, the impact of photography on architectural design. She describes how architectural photographic protocols developed in Germany in the early twentieth century, expanded significantly in the wartime and postwar diaspora, and accelerated dramatically with the advent of postmodernism. In modern architecture, she argues, how buildings looked and how photographs made them look overlapped in consequential ways. In architecture and photography, the modernist concepts that were visible to the largest number over the widest terrain with the greatest clarity carried the day. This richly illustrated work shows, for the first time, how new ideas and new buildings arose from the interplay of photography and architecture—transforming how we see the world and how we act on it.

Photography for Architects Martine Hamilton Knight, 2024-01-19 ***Shortlisted for the Architectural Book Awards 2024*** We live in a world driven by images, but with so much visual noise, is anyone really looking? How does an architect ensure their portfolio is within view of the right audience? Photographs are still as vital to architectural practice as they ever were. However, creation and circulation, once in the hands of skilled professionals, is now perceived as being ‘free’ and within easy reach of all. But where is the clarity? What is the message? By setting out the case for curated image making, considered photography may again be placed at the centre of architectural marketing strategies. Photography for Architects guides the reader through various topics: from establishing a visual brand and sharing images online, to producing content in-house and commissioning professionals. It explores the still and moving image, creating books and exhibitions for legacy value, compiling award entries, and engaging with trade press. Little understood aspects regarding legal rights and obligations, ethics, copyright, and licensing images for use are discussed in clear language. Multiple photographic examples

and conversations with international practitioners highlight the various themes throughout. Written by a working architectural photographer whose life has been spent in commercial practice, this easy-to-read, richly illustrated guide is essential reading for architects and designers alike who are working with images and image makers.

How to Photograph Buildings and Interiors Gerry Kopelow, 2002-07 Architectural photographer Gerry Kopelow created this guide on how to take high-quality photographs for architects, interior designers, engineers, heritage preservers, professional photographers, and anyone interested in shooting buildings. The book starts with the basics, discussing topics such as buying equipment and supplies, technical considerations involving cameras, films, and lighting, and preparing materials for publication. More advanced topics include medium- and large-format cameras, working on location and the architectural photographer's darkroom. The third updated and expanded edition contains three new chapters that focus on the world of digital photography. They explain everything that you need to know from how digital imagery works, to available digital cameras, to scanning, printing, and digital image enhancement, to electronic marketing on the Internet. This practical how-to book includes hundreds of color and black-and-white photographic examples and is the definitive title on the subject. - back cover.

Building with Light Robert Elwall, 2004 Ever since its invention, photography has enjoyed a close and mutually stimulating relationship with architecture - an association underlined by one description of photography as building with light. So well established is this link that photography is now regarded as the easiest and most reliable means of making architecture and its ideas accessible to a wider public. Our first, sometimes our only, impression of a building often comes from a photograph, and the skilled photographer can help us to see even the most familiar structures with a fresh eye. This book offers a lively exploration of the development of architectural photography and some of its key themes. From the earliest examples of the genre in the nineteenth century to today's digital revolution, Robert Elwall skilfully focuses on the changing aesthetic of the medium worldwide. Included are such topics as the early influence of architectural drawing; the growth of specialist photographic firms documenting the nineteenth-century building boom; the influence of photography on both architectural practice and history; the invention of half-tone reproduction; the role of photography in the spread of Modernism; the impact of colour photography during the 1970s and 1980s; and the increasing use of computers to shape a new direction. Authoritatively written by a world-renowned expert and illustrated with arresting images from collections throughout the world, this study is essential reading for anyone interested in architecture, photography and the history of their special relationship.
