The Five Biggest Unsolved Problems in Science Arthur W. Wiggins, Charles M. Wynn, 2003-09-12 An in-depth look at the most intriguing puzzles in science today In this illuminating book, professors Arthur Wiggins and Charles Wynn explore what they believe are the five biggest science problems: Physics: Why do some particles have mass, while others have none? Chemistry: By what series of chemical reactions did atoms form the first living things? Biology: What is the complete structure and function of the proteome? Geology: Is accurate, long-range weather forecasting possible? Astronomy: Why is the universe expanding faster and faster? Wiggins and Wynn carefully explain each of these problems, then discuss the theories that address them. Some of the many topics covered include string theory, the human genome, chaos theory, and protein folding. Featuring humorous illustrations from renowned science cartoonist Sidney Harris, this book invites you to explore the events that led to these problems and the cutting-edge efforts being made to solve them. The authors also provide Idea Folders, which contain additional details about the unsolved problems, and Resources for Digging Deeper, such as books, periodicals, and Web sites.

Unsolved Problems in Ecology Andrew Dobson, David Tilman, Robert D. Holt, 2020-06-02 This volume provides a series of essays on open questions in ecology with the overarching goal being to outline to the most important, most interesting or most fundamental problems in ecology that need to be addressed. The contributions span ecological subfields, from behavioral ecology and population ecology to disease ecology and conservation and range in tone from the technical to more personal meditations on the state of the field. Many of the chapters start or end in moments of genuine curiosity, like one which takes up the question of why the world is green or another which asks what might come of a thought experiment in which we turn-off evolution entirely--

Unsolved Problems in Astrophysics John N. Bahcall, Jeremiah P. Ostriker, 1997-02-06 The field of astrophysics is in the midst of a technological renaissance. The emphasis of this collection of essays, composed by a stellar group of astronomers and astrophysicists, is on the current state of our knowledge as a preparation for future unraveling of more mysteries of the universe, which appear most amenable to solution. Aspiring astrophysicists will be enthralled.

23 Problems in Systems Neuroscience Jan Leonard Hemmen, Terrence J. Sejnowski, 2006 The complexity of the brain and the protean nature of behavior remain the most elusive area of science, but also the most important. van Hemmen and

Sejnowski invited 23 experts from the many areas--from evolution to qualia--of systems neuroscience to formulate one problem each. Although each chapter was written independently and can be read separately, together they provide a useful roadmap to the field of systems neuroscience and will serve as a source of inspirations for future explorers of the brain.

The World's 20 Greatest Unsolved Problems John R. Vacca,2005 When Phebe Hedges, a woman in East Hampton, New York, walked into the sea in 1806, she made visible the historical experience of a family affected by the dreaded disorder of movement, mind, and mood her neighbors called St.Vitus's dance. Doctors later spoke of Huntington's chorea, and today it is known as Huntington's disease. This book is the first history of Huntington's in America. Starting with the life of Phebe Hedges, Alice Wexler uses Huntington's as a lens to explore the changing meanings of heredity, disability, stigma, and medical knowledge among ordinary people as well as scientists and physicians. She addresses these themes through three overlapping stories: the lives of a nineteenth-century family once said to "belong to the disease"; the emergence of Huntington's chorea as a clinical entity; and the early-twentieth-century transformation of this disorder into a cautionary eugenics tale. In our own era of expanding genetic technologies, this history offers insights into the social contexts of medical and scientific knowledge, as well as the legacy of eugenics in shaping both the knowledge and the lived experience of this disease.

*Unanswered* Jeremiah J. Johnston,2015-10-06 We live in a radically skeptical age. Tough questions are being asked about Christianity. And most believers are ill-equipped to provide the answers our culture and communities desperately need. Many in today's church do not know the Bible as well as they should and they struggle with their own "big questions" about the faith. After receiving more than four thousand questions at his Christian Thinkers Society events over the span of six years, Dr. Jeremiah Johnston began to recognize six categories of recurring, trending questions that dominated the rest. In *Unanswered*, he tackles these tough issues that plague the minds of believers but are rarely addressed in church, such as... Why is it that God often seems to remain silent? How can we trust in the bodily resurrection of Jesus, and what does it mean for us today? What do Christians need to understand about suicide and mental illness? How should Christians respond to spiritual darkness and the obsession with paranormal activity? Why is biblical illiteracy so dangerous for Christians and the church? Why do we experience suffering and pain? *Unanswered* will leave you enriched, characterized by a thinking faith, capable to communicate confidently, and committed to escape the tendency to offer trite answers to a skeptical world.

Radulescu, Titu Andreescu, 2009-06-12 Problems in Real Analysis: Advanced Calculus on the Real Axis features a comprehensive collection of challenging problems in mathematical analysis that aim to promote creative, non-standard techniques for solving problems. This self-contained text offers a host of new mathematical tools and strategies which develop a connection between analysis and other mathematical disciplines, such as physics and engineering. A broad view of mathematics is presented throughout; the text is excellent for the classroom or self-study. It is intended for undergraduate and graduate students in mathematics, as well as for researchers engaged in the interplay between applied analysis, mathematical physics, and numerical analysis.

*Fundamentals of Cosmology* James Rich, 2001 The book is aimed at physics students and professional physicists who wish to understand the basics of cosmology and general relativity as well as the most recent cosmological observations and models. It presents a self-contained introduction to general relativity that is based on the homogeneity and isotropy of the local universe. The simplicity of this space allows general relativity to be introduced in a very simple manner while laying the foundation for the treatment of more complicated problems. The latest cosmological observations and theories are discussed. Emphasis is placed on estimations of the densities of matter and of vacuum energy, and on investigations of the primordial density fluctuations and the nature of dark matter.

*Unsolved Mysteries of Science* John Malone, 2008-05-02 A LIVELY EXPLORATION OF THE BIGGEST QUESTIONS IN SCIENCE How Did the Universe Begin? The Big Bang has been the accepted theory for decades, but does it explain everything? How Did Life on Earth Get Started? What triggered the cell division that started the evolutionary chain? Did life come from outer space, buried in a chunk of rock? What is Gravity? Newton's apple just got the arguments started, Einstein made things more complicated. Just how does gravity fit in with quantum theory? What Is the Inside of the Earth Like? What exactly is happening beneath our feet, and can we learn enough to help predict earthquakes and volcanic eruptions? How Do We Learn Language? Is language acquisition an inborn biological ability, or does every child have to start from scratch? Is There a Missing Link? The story of human evolution is not complete. In addition to hoaxes such as Piltdown Man and extraordinary finds such as Lucy, many puzzles remain. What, in the end, do we mean by a missing link?

Open Problems in Mathematics John Forbes Nash, Jr., Michael Th. Rassias, 2018-05-31 The goal in putting together this unique compilation was to present the current status of the solutions to some of the most essential open problems in pure and applied mathematics. Emphasis is also given to problems in interdisciplinary research for which mathematics plays a key role. This volume comprises highly selected contributions by some of the most eminent mathematicians in the international mathematical community on longstanding problems in very active domains of mathematical research. *Geometric Folding Algorithms* Erik D. Demaine, Joseph O'Rourke, 2007-07-16 Did you know that any straight-line drawing on paper can be folded so that the complete drawing can be cut out with one straight scissors cut? Over the past decade, there has been a surge of interest in such problems, with

applications ranging from robotics to protein folding. With an emphasis on algorithmic or computational aspects, this treatment gives hundreds of results and over 60 unsolved 'open problems' to inspire further research.
