Lincoln Logs Building Manual Dylan Dawson, 2007-12 For generations, children have loved playing with LINCOLN LOGS building sets and discovering just how inventive they can be. The brainchild of John Lloyd Wright (son of the famous architect), these interlocking logs open up endless possibilities for kids: anything a child can dream up, he or she can build. Plus, every time kids place the logs in position, they're enhancing their manual dexterity. But there is one thing this wonderful plaything has never had: a detailed manual that explains exactly how to create specific projects. Finally, it's here, complete with an interactive, easy-to-use CD-ROM that lets children (and probably more than a few grownups with fond memories!) go straight to the directions they need. Blueprints lay out every step that goes into constructing a bank, barn, farmhouse, firehouse, frontier tower, multiple cabins, and much more.

hobbies, e-textiles, foodcrafting, DIY couture, fabrication, upcycling, and STEM right in the middle of the information gateway—the library. This book completely explains the makerspace concept and supplies real-world implementation guidance and inexpensive programming ideas that can be used as-is or adapted to suit a specific library or community's needs. Readers will be able to hit the ground running to implement their own makerspace with practical project ideas they can put to use immediately.

The Five Biggest Unsolved Problems in Science Arthur W. Wiggins, Charles M. Wynn, 2008-05-02 An in-depth look at the theories behind the most intriguing puzzles in physics, chemistry, biology, earth science, and astronomy In *The Five Biggest Ideas in Science*, authors Arthur W. Wiggins and Charles M. Wynn discussed science's most important current ideas. Now, they tackle the questions that science has been unable to answer-so far. Choosing one unsolved problem from each discipline, they explore the current scientific thinking behind these questions: How are particle masses determined? How did simple atoms first combine to form complex molecules? What role does the genome play in the development of life? Why is it so difficult to predict the weather? And what is the future of the universe? Featuring cartoons by Sidney Harris, the book includes discussions of recent theories such as the God particle, string theory, brane theories, and the Theory of Everything and also explores other science questions. Arthur W. Wiggins (Farmington Hills, MI) is a Professor of Physics at Oakland Community College in Michigan. Charles M. Wynn (Willimantic, CT) is a Professor of Chemistry at Eastern Connecticut State College. They collaborated on *The Five Biggest Ideas in Science* (0-471-13812-6).
